Professional Summary

With two years of dedicated experience in self-made projects, I have cultivated a deep understanding and proficiency in backend web application development. Through independent endeavors, I have become adept at utilizing Java Spring Boot as well as Node JS to architect robust and scalable backend systems. My expertise encompasses the entire software development lifecycle, from conceptualization to deployment, ensuring high-quality and efficient solutions. I have a strong track record of prioritizing security and reliability in my projects, implementing best practices for data management, authentication, and transaction handling. My commitment to continuous learning and innovation drives me to deliver results that exceed expectations, making me a valuable asset in any backend development team.

Projects

Online Banking Application: In a self-driven project, I developed an Online Banking Application from scratch. Using Java Spring Boot for the backend and Angular for the frontend, I ensured a seamless and secure user experience. The primary focus was on implementing secure transaction management, incorporating features such as real-time confirmation messages for both senders and receivers. Additionally, I integrated OTP functionality to enhance authentication security. Creating an intuitive admin panel, I enabled user account management functionalities like blocking and unblocking. Leveraging JWT authentication, I maintained robust security measures throughout the application. The frontend design, crafted using Angular and Tailwind CSS, prioritized user-friendliness and modern aesthetics. This project showcases my ability to independently manage and execute software development projects, with a strong emphasis on security, functionality, and user experience.

Online Book Rental Agency: I created an Online Book Rental Agency where people can easily find and rent books online. Users can browse through different categories to find the books they like and rent them for a certain period. I also made it easy for administrators to manage the rental process. They can keep track of rented books, know when they're due back, and control user accounts by blocking or unblocking them. This project demonstrates my ability to create user-friendly solutions for online book rental services while also making it simple for administrators to manage.

Gym Workout Tracker: I developed a Gym Workout Tracker app to help people keep track of their daily gym activities easily. Users can log their workouts, noting what exercises they did each day. They can also look back at their previous workouts from different months. Additionally, I made it simple for users to use the app to record their progress and stay motivated. This project showcases my ability to create user-friendly solutions for tracking gym workouts, making it easy for people to stay organized and focused on their fitness goals.

Skills

Soft Skills: Communication, Strategic Thinking, Adaptability, Problem Solving, Relationship Building

Technical Skills: Java Spring Boot, Java Unit Testing, Angular, Node Js, SQL, HTML, CSS, JavaScript, Tailwind Css, Git Github, C++, Presentation Skills.

Education

Bs Computer Science: University of Central Punjab, Lahore (Current)
